Chapter 1.

Dynamic RBF networks

I.B. Ciocoiu

1	Introduction	1
2	A system theoretic perspective	3
3	Discrete-time dynamic RBF networks	5
3.1	The learning algorithms	6
3.2	Simulation results	8
3.2.1	System identification	9
3.2.2	Chaotic time series prediction	11
4	Continuous-time RBF networks	13
4.1	Storing stable equilibria and limit cycles	13
4.2	Computing with attractors	18
4.3	A hierarchical associative memory	22
5	Conclusions	26
	References	27

Chapter 2.

A hyperrectangle-based method that creates RBF networks

M. Kubat

1	Introduction	31
2	Problem definition	33
3	Solution	36
3.1	Hyperrectangular regions of high purity	36
3.2	Decision-tree based initialization of RBF networks	39
3.3	Discussion	42
4	Classification accuracy	43
5	Conclusion	46
	References	48

Chapter 3.

Hierarchical radial basis function networks

N.A. Borghese

1	Introduction	51
---	--------------------	----

2	The HRBF network	53
2.1	The Gaussian filter.....	53
2.2	Definition of a real linear filter.....	54
2.3	Computing Δx_c , M and σ	55
2.4	Computing the $\{w_k\}$	57
2.5	Building the hierarchy of RBFs.....	58
3	Reconstruction of 3D surfaces from range data	61
4	Conclusion.....	63
	References	63

Chapter 4.

RBF neural networks with orthogonal basis functions

P. András

1	Introduction	67
2	Problem formulation.....	70
3	The problem in orthogonal context	73
4	An example: the Fourier approximation.....	77
5	Orthogonalizing the class of basis functions	79
6	Orthogonalizing the class of Gaussian functions	81
6.1	Orthogonal Gaussian functions.....	82
6.2	Completing the class of Gaussian functions.....	84
6.3	How does this work?	87
7	Practical considerations	91
8	Conclusions	92
	References	93

Chapter 5.

On noise-immune RBF networks

S.-T. Li and E.L. Leiss

1	Introduction	95
2	The need for noise-immune RBFNs.....	98
3	The theory of robust estimates	99
4	The noise-immunity of RBFNs	100
5	High noise-immune RBF networks	103
6	Adaptive noise-immune RBFNs.....	108
7	Experimental results and analysis	110
7.1	One-dimensional function approximation	111
7.1.1	Vertical outliers.....	112

7.1.2	Gaussian noise.....	115
7.2	Two-dimensional function approximation	117
7.3	Controlling bias and variance by AR^2 BFN	119
8	Conclusions	121
	References	123

Chapter 6.

Robust RBF networks

A.G. Borş and I. Pitas

1	Introduction	125
2	Estimation of RBF parameters using the LVQ algorithm	128
2.1	Classical statistics estimation	129
2.2	Median RBF networks	130
2.3	Alpha-trimmed mean RBF networks	133
3	Theoretical assessment	134
4	Experimental results	146
5	Conclusions	148
	References	150

Chapter 7.

An introduction to kernel methods

C. Campbell

1	Introduction	155
2	Kernel methods for classification, regression, and novelty detection	156
2.1	Binary classification	156
2.2	Multiclass classification.....	161
2.3	Allowing for training errors: soft margin techniques	162
2.4	Novelty detection.....	164
2.5	Regression.....	167
2.6	Enhanced learning strategies	171
3	Algorithmic approaches to training VMs	174
3.1	Chunking and decomposition	175
3.2	Decomposition and sequential minimal optimization	175
4	Applications.....	178
5	Conclusion.....	180
	Acknowledgments	181
	Appendix 1: Generalization bounds	181

Appendix 2: Kernel substitution and Mercer's theorem	183
References	185

Chapter 8.

Unsupervised learning using radial kernels

C. Fyfe, D. MacDonald, P.L. Lai, R. Rosipal, and D. Charles

1	Introduction	193
2	Kernel PCA	194
2.1	The linear kernel	194
2.2	Nonlinear kernels	195
2.3	The curse of kernel dimensionality	197
3	Kernel principal factor analysis	199
3.1	Principal factor analysis	200
3.2	The varimax rotation	201
3.3	Kernel principal factor analysis	201
3.4	Simulations	205
4	Kernel exploratory projection pursuit	205
4.1	Exploratory projection pursuit	205
4.2	Kernel exploratory projection pursuit	206
4.3	Simulations	207
5	Canonical correlation analysis	207
5.1	Kernel canonical correlation analysis	210
5.2	Simulations	212
6	Conclusion	216
References	216

Chapter 9.

RBF learning in a non-stationary environment: the stability-plasticity dilemma

F.H. Hamker

1	Introduction	219
1.1	Previous approaches	220
1.2	Proposed approach	222
1.2.1	Insertion of nodes	222
1.2.2	Adaptive learning parameters	223
1.2.3	Framework	223
2	The algorithm	225
2.1	Structure	225

2.2	Variables of each node.....	225
2.3	Adaptation of the representation layer.....	227
2.4	Adaptation of the output layer	229
2.5	Insertion and deletion of nodes in the representation layer ..	230
2.6	Adaptation of the counters and edges of the nodes in the representation layer.....	233
2.7	Parameter discussion	234
3	Illustration with artificial data sets	234
4	Evaluation using real data sets	236
4.1	Performance measures	236
4.2	Analysis of the data	243
4.3	Analysis of stability and plasticity.....	244
5	Conclusion.....	244
	Acknowledgments	247
	References	247

Chapter 10.

A new learning theory and polynomial-time autonomous learning algorithms for generating RBF networks

A. Roy

1	Introduction	254
2	The classical connectionist learning framework	254
2.1	Designing and training networks	255
3	A new learning theory – an outline of the basic ideas.....	257
3.1	Brain-like learning need not be based on “local learning” mechanisms.....	257
3.1.1	Connectionisms local learning – what it really implies ...	257
3.1.2	The contrary evidence from neuroscience about local learning.....	258
3.1.3	New theory – non-local means of learning is brain-like ..	258
3.2	New theory – brain-like learning is not memoryless.....	259
3.3	New theory – a brain-like learning system must make an explicit attempt to generalize.....	260
3.4	New theory – there should be some restriction on the nature of information that can be supplied to a brain-like learning system	261
4	Radial basis function (RBF) nets for function approximation ..	261
4.1	Basic ideas and the algorithm	263
4.2	Generation of Gaussian units for function approximation ...	265

4.3	The sequential approximation (SA) algorithm for function approximation	267
5	Radial basis function (RBF) nets for classification	268
5.1	Generation of Gaussian units for classification	271
5.2	The Gaussian masking (GM) algorithm for classification....	273
6	Conclusions	275
	Acknowledgments	275
	References	275

Chapter 11.

Evolutionary optimization of RBF networks

E. Lacerda, A. de Carvalho, and T. Ludermir

1	Introduction	281
2	Radial basis function networks.....	283
3	A brief look at genetic algorithms	285
4	Evolutionary approaches for ANN design	288
4.1	Representation approaches	289
4.2	Evaluation	292
4.3	Reproduction.....	293
5	Evolutionary optimization of RBF networks	294
5.1	Billings and Zheng model.....	295
5.2	Maillard and Gueriot model.....	296
5.3	Carse and Fogart model	297
5.4	Neruda model.....	299
5.5	Other models.....	300
6	The proposed model	300
6.1	Experiments	303
7	Conclusions	305
	Acknowledgements	305
	References	306
